

Kevin David Uribe Ocampo

Full-Stack Developer & Solutions Architect

Pereira, Risaralda | kevindaviduribe@gmail.com | +57 300 1090344 | neziak.cloud
LinkedIn: Kevin David Uribe Ocampo | GitHub: kaizen1602

Professional Profile

Full-Stack Developer and Solutions Architect focused on the design and implementation of complex SaaS platforms and multi-tenant architectures. Specialized in the Node.js ecosystem using Fastify, NestJS, and Prisma ORM, with a strong emphasis on backend performance and data isolation. Experienced in advanced process automation through AI agents (n8n, Redis) and optimized infrastructure management with Docker and Traefik. Passionate about continuous improvement and building robust, scalable solutions.

Education

National Open and Distance University (UNAD) – Systems Engineering (Professional Degree)
Dosquebradas | Professional internship completed in July 2026

SENA – Software Analysis and Development Technologist
Cartago, Valle del Cauca | Apr 2024 – Jun 2026

Experience

Neziak – CEO, Executive Director & Lead Solutions Architect

Pereira, Risaralda | Jun 2024 – Present

- Designed and implemented the software architecture of a scalable multi-tenant ERP platform using Fastify, Prisma ORM, and React.
- Configured and managed VPS infrastructure and deployment workflows using Docker, Docker Compose, and Traefik, ensuring secure and isolated environments for each tenant.
- Led backend development focused on high performance, database query optimization, and efficient multi-tenancy data isolation strategies.

SISGLO – Full-Stack Developer

Medellín, Antioquia | Jun 2025 – Apr 2026

- Designed and developed a comprehensive web system (AppVisitas) aimed at digitizing, controlling, and managing clinical and technical services.
- Implemented critical modules for medical scheduling management and a symptom classification system to optimize patient care.
- Built the application using Node.js on the backend and React with TypeScript on the frontend, ensuring clean interfaces and type safety.
- Secured the platform with JWT-based authentication and improved response times through Redis-powered caching.

Projects

Scalable Automation Infrastructure

Design and optimization of server architectures for efficient execution of workflows and autonomous agents.

- Designed and migrated the automation ecosystem from isolated containers to a shared orchestrator model (n8n), significantly improving scalability and operational efficiency.
- Implemented Redis clusters for advanced queue management, state control, and real-time workload distribution.
- Configured reverse proxy environments (Traefik/Nginx) on VPS infrastructure to ensure secure webhook routing and environment-level data isolation.

Jun 2025 – Apr 2026

Skills

Backend & Architecture: Node.js, Fastify, NestJS, Prisma ORM, REST APIs, Multi-Tenant Architecture

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS

DevOps & Infrastructure: Docker, Docker Compose, Traefik, Nginx, VPS Administration (Linux), CI/CD

Automation, AI & Networking: n8n (Orchestration), Redis, LLM Integration, MikroTik (WinBox), Ubiquiti
